Meva

Specialist

in the production and supply
of hazardous waste containers

... since 1898

SOLID WASTE

The top priority of waste management should be primarily to prevent the generation of waste in the first place. Given the nature of industrial plants, warehouses, and other production plants where people come in contact with hazardous substances, that is, unfortunately, not possible. That's why we offer a wide range of products for the collection and storage of hazardous solid waste.

- **containers**
- **waste containers**
- **barrels with lid**
- **packaging for barrels**
- **boxes**
- **ESD packaging**

LIQUID WASTE

The storage of liquid substances is generally tied to a number of important rules. Liquids will enter even the smallest of openings, meaning the packaging must be sufficiently tight. However, it's not always sufficient to rely solely on the perfect tightness of the packaging or on proper handling of the packaging. Therefore, it's important to accompany the packaging with a suitable collection system that will capture any leaks as required by the Water Act. We offer solutions for the safe storage of both small and large quantities of liquid.

- **IBC containers**
- **double-layered tanks**
- **containers and cans**
- **barrels with plugs**

SPILL CONTROL

Used for protecting the environment and ensuring safety in the workplace in warehouses, production plants, and service centres. Sump trays and floors guarantee that any leakage from stored containers or barrels collects in the waterproof tray and does not reach the floor proper or the sewer system. Sump trays and floors are available in various sizes and capacities for use with a wide range of liquids hazardous to water.

- **metal, plastic, or fiberglass**
- **open or closed design**
- **static or mobile**
